Education

University of Florida — Gainesville, FL
Ph.D., Electrical & Computer Engineering — *2017 — 2022*
- Dissertation: *Balancing the Power Grid with Distributed Control of Flexible Loads*
- Advisor: Dr. Sean Meyn

University of Florida — Gainesville, FL
M.S., Electrical & Computer Engineering

University of Mumbai — Mumbai, India
Bachelor of Engineering, Electronics & Communications Engineering

Grid-Specific Work Experience

Senior Market Design Specialist — June 2025 — Present
PJM Interconnection — *Philadelphia, PA*

- Broad focus on energy and ancillary service market reforms to align price formation and dispatch with the flexibility and reliability needs of the system
- Part of Reserve Certainty Senior Task Force supporting comprehensive changes to the reserve markets, including introduction of new reserve products to address challenges associated with netload uncertainty and ramping as well as nodal pricing of reserves
- Computation of proposed demand curves informed by stochastic analysis for the new and updated reserve services
- Market reforms for energy storage resources including new rules to allow opportunity costs as part of market offers, state of charge accounting and optimization, as well as changes to energy must offer rules for capacity storage resources

Engineer III — Market Design — May 2024 — June 2025
Midcontinent Independent System Operator (MISO) — *Indianapolis, IN*

- Design of capacity markets with reliability-based demand curves (including mathematical formulation, software implementation, testing, and stakeholder interactions)

Postdoctoral Research Scholar — July 2022 — May 2024
Arizona State University — *Tempe, AZ*

- Focus on design of robust model predictive control and reinforcement learning techniques for automatic dispatch of distributed energy resources in power grid

Research Intern — 2019 & 2021
Electric Power Engineers (EPE) — *Austin, TX*

- Implemented a distribution-level short-term load forecasting tool in Python using a deep learning architecture based on LSTM

Graduate Research Assistant — 2017 — 2022
University of Florida — *Gainesville, FL*

- Formulation of distributed stochastic control architecture to extract virtual energy storage (VES) from residential electric loads for ancillary services: ensures minimal load-to-grid communication, consumer privacy, and load-level QoS
- Design of simulation testbed to evaluate performance of control architectures

Skills

- **Languages** — Python, MATLAB, General Algebraic Modeling System (GAMS)
- **Mathematics** — Real Analysis, Stochastic & Optimal Control, Convex Optimization
- **Misc.** — Git, Azure Databricks, Jupyter/pySpark Notebooks
